**Course: Microbiology**

**(Choice Based Credit, Grading and Semester System  
with effect from the academic year 2020-2021)**

## **Preamble**

Bachelor of Science (B.Sc.) in Microbiology is an under graduate program of Department of Microbiology, Karmaveer Bhaurao Patil College Vashi, Navi Mumbai [Autonomous College]

Microbiology is a branch of science that studies microorganisms such as bacteria, protozoa, algae, fungi, bacteria, viruses, etc. These studies integrate cytology, physiology, ecology, genetics and molecular biology, evolution, taxonomy and systematics with a focus on microorganisms.

The relevance and applications of microorganisms to the surrounding environment including human life and Mother Nature becomes part of this branch. Since inception of this branch of science, Microbiology has remained a field of active research and ever expanding in all possible directions; broadly categorized as pure and applied science.

Different branches of Pure Microbiology based on taxonomy are Bacteriology, Mycology, Protozoology and Parasitology, Phycology and Virology; with considerable overlap between these specific branches over each other and also with other disciplines of life sciences, like Biochemistry, Botany, Zoology, Cell Biology, Biotechnology, Nanotechnology, Bioinformatics, etc.

Areas in the applied Microbial Sciences can be identified as: Genetics, Medical, Immunology, Biochemistry, Biotechnology, Pharmaceutical, Industrial (Fermentation, Pollution Control), Air, Water, Food and Dairy, Agriculture (Plant Pathology and Soil Microbiology), Veterinary, Environmental (Ecology, Geomicrobiology); and the technological aspects of these areas.

Microbiological tools have been extensively used to study different life processes and are cutting edge technologies. There is a continual demand for microbiologists in the work force – education, industry and research. Career opportunities for the graduate students are available in manufacturing industry and research institutes at technical level. The content of a syllabus should be such that it maintains continuity with the course content of higher secondary class and post graduate course. The present curriculum is made keeping this in mind and is an effort to impart fundamental

knowledge of the subject needed at this level. The curriculum is designed as per the guidelines for Choice Based Credit System and reflects the total credit, teaching hours and evaluation pattern.

## **Objectives of the Course:**

- ✓ To enrich students' knowledge and train them in the pure microbial sciences
- ✓ To introduce the concepts of application and research in Microbiology
- ✓ To inculcate sense of scientific responsibilities and social and environment awareness
- ✓ To help students' build-up a progressive and successful career

## Program Outcomes (POs)

<b>PO-1</b>	<p><b>Disciplinary Knowledge:</b></p> <p>(i) Acquire the knowledge with facts and figures related to various subjects in pure sciences such as Physics, Chemistry, Mathematics, Microbiology and Computer Science; and Biotechnology, Information Technology and its other fields related to the program.</p> <p>(ii) Understand the basic concepts, fundamental principles, theoretical formulations and experimental findings and the scientific theories related to various scientific phenomena and their relevance in the day-to-day life.</p>
<b>PO-2</b>	<p><b>Communication Skills:</b> Develop various communication skills such as reading, listening and speaking skills etc., which we will help in expressing ideas and views clearly and effectively.</p>
<b>PO-3</b>	<p><b>Critical Thinking:</b> Think creatively to propose novel ideas in explaining the scientific data, facts and figures related to science and technology.</p>
<b>PO-4</b>	<p><b>Analytical Reasoning and Problem Solving:</b> Identify, describe, formulate, interpret, analyze the data systematically and solve theoretical and numerical problems in the diverse areas of science and technology and provide alternate solutions to the problems.</p>
<b>PO-5</b>	<p><b>Sense of Inquiry:</b> Curious for asking relevant questions like why and how for better understanding of the basic concepts, fundamental principles, scientific theories and applications related to the study.</p>
<b>PO-6</b>	<p><b>Use of Modern Tools:</b> Use of modern tools, equipments, instrumentation and laboratory techniques to design and perform the experiments and write the programs in different languages (software).</p>
<b>PO-7</b>	<p><b>Research Skills:</b> Ability to search for, find, collect, analyze, interpret and evaluate information/data that is relevant to the subjects related to science and technology being studied.</p>
<b>PO-8</b>	<p><b>Application of Knowledge:</b> Develop scientific outlook with respect to the subjects related to science and technology and also participate in various social and cultural activities.</p>
<b>PO-9</b>	<p><b>Ethical Awareness:</b> Imbibe ethical and social values in personal and social life leading to cultured and civilized personality.</p>
<b>PO-10</b>	<p><b>Teamwork:</b> Work effectively within the groups and individuals, participate and take initiative for various field-based situations related to science, technology and society at large.</p>
<b>PO-11</b>	<p><b>Environment and Sustainability:</b> Understand how development in science and technology and interdisciplinary subjects are taking place for protecting our environment and sustainable developments.</p>
<b>PO-12</b>	<p><b>Lifelong Learning:</b> Ability of self-driven to explore, learn and gain knowledge and new skills to improve the quality of life and sense of self-worth by paying attention to the ideas and goals throughout the life.</p>

## **Program Specific Outcomes [PSO's]: UG**

**PSO\_1:** Understand the various aspects of microbial world and history of microbiology

**PSO\_2:** Differentiate and classify different types of microorganism and its characteristics

**PSO\_3:** Distinguish between Prokaryotes and Eukaryotes with respect to their ultra-structure and functions

**PSO\_4:** Understand & differentiate the requirement of nutrients and environmental conditions for the growth of microorganisms

**PSO\_5:** Apply the knowledge of basic instrumentation, basic techniques in microbiology and control of microorganism

**PSO\_6:** Explain and describe types and functions of different biomolecules found in living cells

**PSO\_7:** Describe the aspects of microbial ecology and industrial microbiology

**PSO\_8:** Illustrate the basic immunology and medical microbiology

**T.Y.B.Sc. Microbiology: Curriculum**  
**Revised for Credit Based Semester & Grading System**  
**To be implemented from the academic year 2020-2021**  
**SEMESTER V**

**Theory:**

	<b>IV</b>	<b>Industrial Microbiology and Bioprocess Technology</b>		

## UGMB501 Microbial Genetics – I

### Course Outcome: Paper I

By the end of the course, a student should develop the ability to

**CO1:** Describe roles of all the enzymes and proteins involved in DNA replication.[2]\*

**CO2:** Compare and contrast between Prokaryotic and Eukaryotic DNA replication.[4]\*

**CO3:** Forecast effect of Mutations on gene expression and regulation.[6]\*

**CO4:** Compare & contrast between Composite and Non-composite Transposons, IS elements and Transposons.[4]\*

**CO5:** Solve analytical problems on Genetics.[4]\*

**CO6:** Perform mutation experiments by UV survival curve and identify it by performing Gradient Plate Technique. [3]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

<b>SEMESTER V Paper I</b>		
<b>Course Code</b>	<b>Title</b>	<b>Credits</b>
<b>UGMB501</b>	<b>Microbial Genetics - I</b>	<b>4 Credits (60 Lectures)</b>
<b>Unit I</b>	<b>DNA Replication</b> Three models of DNA Replication Semiconservative Replication in prokaryotes: The Meselson and Stahl Experiment	<b>(15 Notional Hours)</b>

	<p>DNA replication in Prokaryotes- with special reference to <i>E. coli</i></p> <ol style="list-style-type: none"> <li>a. The J. Cairn Experiment</li> <li>b. Molecular Mechanism of DNA replication</li> </ol> <p>Enzymology of DNA replication-</p> <ol style="list-style-type: none"> <li>a. Helicases, DNA polymerases, ligase, topoisomerases.</li> <li>b. SSB proteins, Tus proteins</li> </ol> <p>Rolling Circle replication</p> <p>DNA replication in Eukaryotes- with special reference to <i>Saccharomyces cerevisiae</i></p> <ol style="list-style-type: none"> <li>a. Semiconservative replication in eukaryotes- The Taylor, Woods &amp; Hughes experiment</li> <li>b. Replicons</li> <li>c. Initiation of replication</li> <li>d. Eukaryotic replication enzymes</li> <li>e. Replicating the ends of chromosomes</li> <li>f. Assembling the newly replicated DNA</li> </ol>	
<p><b>Unit II</b></p>	<p><b>Gene Expression and Regulation</b></p> <p>2.1 The transcription process</p> <p>2.2 Transcription in bacteria- Initiation, Elongation &amp; Termination</p> <p>2.3 Transcription in eukaryotes</p> <ol style="list-style-type: none"> <li>a. Eukaryotic RNA Polymerases</li> <li>b. Transcription by RNA Polymerase II</li> <li>c. The structure and production of eukaryotic mRNAs</li> <li>d. Splicing mechanisms- Self- splicing introns, The spliceosome</li> <li>e. RNA editing</li> </ol> <p>Translation</p> <ol style="list-style-type: none"> <li>a. tRNA</li> <li>b. Ribosomes</li> <li>c. Initiation of Translation</li> <li>d. Elongation of the polypeptide chain</li> <li>e. Termination of Translation</li> <li>f. Protein sorting</li> </ol> <p>Regulation of gene expression in bacteria</p> <p>a) <i>Lac</i> operon of <i>E. coli</i>- Jacob and Monod's operon model, Positive control, molecular details of regulation</p>	<p><b>(15 Notional Hours)</b></p>

<p><b>Unit III</b></p>	<p><b>Mutations and Repair</b></p> <p>Classification of Mutations:</p> <ol style="list-style-type: none"> <li>a. Based on molecular change</li> <li>b. Based on phenotypic effects</li> <li>c. Based on location</li> </ol> <p>The Fluctuation Test</p> <p>Spontaneous Mutations:</p> <ol style="list-style-type: none"> <li>a. Replication errors</li> <li>b. Tautomeric shifts</li> <li>c. Depurination &amp; deamination</li> <li>d. Oxidative damage</li> <li>e. Transposable elements</li> </ol> <p>Induced Mutations:</p> <ol style="list-style-type: none"> <li>a. Base analogs</li> <li>b. Base- modifying agents</li> <li>c. Intercalating agents</li> <li>d. Adduct-Forming agents</li> <li>e. Radiations- Ultraviolet light, Ionizing radiations</li> <li>f. The Ames test</li> </ol> <p>Reverting mutations, Suppression, Pleiotropic mutations, mutator genes</p> <p>Detecting mutations:</p> <ol style="list-style-type: none"> <li>a. Visible mutants</li> <li>b. Nutritional mutants</li> <li>c. Conditional mutants</li> <li>d. Resistance mutants</li> </ol> <p>DNA repair mechanisms</p> <ol style="list-style-type: none"> <li>a. Direct reversal repair- Proofreading, Photoreactivation, repair of alkylation damage</li> <li>b. Excision repair- Base excision repair, Nucleotide excision repair, Methyl-directed mismatch repair, SOS repair</li> <li>c. Double strand break repair in eukaryotes</li> </ol>	<p><b>(15 Notional Hours)</b></p>
<p><b>Unit IV</b></p>	<p><b>Natural Plasmids, Transposable elements &amp; Integrons, Genetic Research</b></p> <p>4.1 Natural Plasmids</p> <ol style="list-style-type: none"> <li>i. Physical nature of plasmids</li> <li>ii. Detection and isolation of plasmids</li> <li>iii. Replication of plasmids</li> <li>iv. Plasmid copy number</li> <li>v. Plasmid incompatibility</li> <li>vi. Plasmid amplification</li> <li>vii. Types of plasmids- R- plasmids, F-plasmid, Col</li> </ol>	<p><b>(15 Notional Hours)</b></p>

	<p>plasmids, Degradative plasmids, Ti plasmids, plasmids encoding toxins &amp; virulence</p> <p>Transposable elements</p> <ol style="list-style-type: none"> <li>a. General features of transposable elements</li> <li>b. Transposable elements in bacteria- Insertion sequences, transposons [Composite &amp; Non-composite]</li> <li>c. IS elements &amp; transposons in plasmids</li> <li>d. Bacteriophage <math>\mu</math></li> <li>e. Transposable elements in yeast- <i>Ty</i></li> <li>f. The transposition machinery</li> <li>g. The transposition reaction- Replicative and non-replicative transposition</li> <li>h. The fate of the donor site</li> <li>i. Target immunity</li> <li>j. Transposons as molecular tools</li> <li>k. Retroposons</li> <li>l. Retrotransposons</li> </ol> <p>Integrans- Role in antibiotic resistance</p> <p>Basic Concepts in Genetic Research</p> <ol style="list-style-type: none"> <li>a. The sub-disciplines of genetics</li> <li>b. Basic and applied research</li> <li>c. Genetic databases &amp; maps</li> <li>d. Organisms for genetics research- Characteristics, examples, representative studies using prokaryotic and eukaryotic organisms</li> </ol>

### **Practical based on UGMB501**

**Course code: UGMBP05/I**

**[Credits -1.5, Notional Hours- 60]**

1. UV survival curve – determination of exposure time leading to 90% reduction
2. Isolation of mutants using UV mutagenesis
3. Gradient Plate Technique
4. Replica plate technique for selection & characterization of mutants – auxotroph & antibiotic resistant
5. Bacterial gene induction with reference to lac operon.
6. Genetics problems

## UGMB502- Medical Microbiology and Immunology -I

### Course Outcome: Paper II

**By the end of the course, a student should develop the ability to**

**CO1:** Justify the role of Quality Control in accurate diagnosis [5]\*

**CO2:** Justify spread of Skin, Respiratory and Urinary tract infection & understanding clinical manifestation [5]\*

**CO3:** Monitor the Prophylactic Measures to minimize risk of infection [4]\*

**CO4:** Distinguish the organs of Immune system based on their structure and function [4]\*

**CO5:** Attribute the mechanism of B-Cells and T-cells in Humoral and Cell Mediated Immune Response respectively [4]\*

**CO6:** Study the characteristics of standard cultures to make diagnosis from patient sample [3]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

5. Rapid identification techniques [Demonstration of Vitek 2]
6. Antigen Preparation: O & H antigen preparation of *Salmonella*. Confirmation by slide agglutination
7. Separation of lymphocytes and their staining
8. Quality control in laboratory
9. Case studies on Epidemics.

## UGMB503- Microbial Biochemistry – I

### Course Outcome: Paper III

**By the end of the course, a student should develop the ability to**

**CO1:** Distinguish between various types of Transport Mechanisms involved in the transport of essential nutrients in the metabolism of a cell. [4]\*

**CO2:** Illustrate and paraphrase complexes present in ETC of Mitochondria. [3]\*

**CO3:** Measure the Energetics of glycolysis, TCA and ED pathway [5]\*

**CO4:** Construct fermentative pathways that are present in microorganisms. [6]\*

**CO5:** Determine a qualitative and quantitative assay for the Phosphatase enzyme [5]\*

**CO6:** Discriminate between Homo-fermentative and Hetero-fermentative microorganisms [5]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

<b>Course Code</b>	<b>Title</b>	<b>Credits</b>
<b>UGMB503</b>	<b>Microbial Biochemistry - I</b>	<b>4 Credits (60 Lectures)</b>
<b>Unit I</b>	<p><b>Composition and architecture of membrane</b></p> <ol style="list-style-type: none"> <li>a. Integral &amp; peripheral proteins &amp; interactions with lipids</li> <li>b. Permeability</li> <li>c. Aquaporins</li> <li>d. Mechanosensitive channels</li> </ol> <p><b>Methods of studying solute transport</b></p> <ol style="list-style-type: none"> <li>a. Use of whole cells</li> <li>b. Liposomes</li> <li>c. Proteoliposomes</li> </ol> <p><b>Solute transport across membrane</b></p> <ol style="list-style-type: none"> <li>a. Active transport &amp; electrochemical gradient</li> <li>b. Ion gradient provides energy for secondary active transport</li> <li>c. Lactose transport</li> <li>d. ATPases and transport (only Na-K ATPase)</li> <li>e. Shock sensitive system – Role of binding proteins</li> <li>f. Phosphotransferase system</li> <li>g. Schematic representation of various membrane transport systems in bacteria.</li> </ol>	<b>(15 Notional Hours)</b>

	<p><b>Membrane channels &amp; pumps:</b></p> <ol style="list-style-type: none"> <li>a. The Transport of Molecules Across a Membrane May Be Active or Passive</li> <li>b. A Family of Membrane Proteins Uses ATP Hydrolysis to Pump Ions Across membrane</li> <li>c. Secondary Transporters Use One Concentration Gradient to Power the Formation of Another</li> <li>d. Specific Channels Can Rapidly Transport Ions Across Membranes</li> <li>e. Gap Junctions Allow Ions and Small Molecules to Flow between Communicating Cell</li> <li>f. ABC transporters use ATP to drive the Active site of a wide variety of Substrates</li> </ol> <p><b>Other examples of solute transport:</b></p> <ol style="list-style-type: none"> <li>a. Iron transport: A special problem</li> <li>b. Assembly of proteins into membranes and protein export</li> </ol>	
<p><b>Unit II</b></p>	<p><b>Bioenergetics &amp; Quorum Sensing</b></p> <p><b>Biochemical mechanism of generating ATP:</b></p> <ol style="list-style-type: none"> <li>a. Substrate-Level Phosphorylation,</li> <li>b. Oxidative Phosphorylation</li> <li>c. Photophosphorylation</li> </ol> <p><b>Electron transport chain</b></p> <ol style="list-style-type: none"> <li>a. Universal Electron acceptors that transfer electrons to E.T.C.</li> <li>b. Carriers in E.T.C. <ol style="list-style-type: none"> <li>i. Hydrogen carriers – Flavoproteins, Quinones</li> <li>ii. Electron carriers – Iron Sulphur proteins, Cytochromes.</li> </ol> </li> <li>c. Mitochondrial ETC <ol style="list-style-type: none"> <li>i. Biochemical anatomy of mitochondria</li> <li>ii. Complexes in Mitochondrial ETC</li> <li>iii. Schematic representation of Mitochondrial ETC</li> </ol> </li> </ol> <p><b>Prokaryotic ETC</b></p> <ol style="list-style-type: none"> <li>a. Organization of electron carriers in bacteria <ol style="list-style-type: none"> <li>i. Generalized electron transport pathway in bacteria</li> <li>ii. Different terminal oxidases</li> </ol> </li> <li>b. Branched bacterial ETC</li> <li>c. Pattern of electron flow in E. coli - aerobic and anaerobic</li> <li>d. Pattern of electron flow in Azotobacter vinelandii</li> </ol>	<p><b>(15 Notional Hours)</b></p>

	<p><b>ATP synthesis</b></p> <ol style="list-style-type: none"> <li>a. Explanation of terms – Proton motive force, Proton pump, Coupling sites, P:O ratio, Redox potential (definition of Standard reduction potential)</li> <li>b. Free energy released during electron transfer from NADH to O<sub>2</sub></li> <li>c. Chemiosmotic theory (only explanation)</li> <li>d. Structure &amp; function of Mitochondrial ATP synthase</li> <li>e. Structure &amp; function of bacterial ATP synthase</li> <li>f. Mechanism by Rotational catalysis</li> <li>g. Inhibitors of ETC, ATPase and uncouplers</li> </ol> <p><b>Other modes of generation of electrochemical energy</b></p> <ol style="list-style-type: none"> <li>a. ATP hydrolysis</li> <li>b. Oxalate formate exchange</li> <li>c. End product efflux, Definition, Lactate efflux</li> <li>d. Bacteriorhodopsin: - Definition, function as proton pump and significance</li> </ol> <p><b>Quorum Sensing:</b></p> <p><b>Quorum Sensing:</b> System similar LuxR/LuxI in non-luminescent bacteria</p>	
<p><b>Unit III</b></p>	<p><b>Methods of Studying Metabolism &amp; Catabolism of Carbohydrates</b></p> <p><b>Experimental Analysis of metabolism</b></p> <ol style="list-style-type: none"> <li>a. Goals of the study</li> <li>b. Levels of organization at which metabolism is studied</li> <li>c. Metabolic probes.</li> <li>d. Use of radioisotopes in biochemistry <ol style="list-style-type: none"> <li>i. Pulse labeling</li> <li>ii. Assay and study of radiorespirometry to differentiate EMP &amp; ED</li> </ol> </li> <li>e. Use of biochemical mutants</li> <li>f. Sequential induction</li> </ol> <p><b>Catabolism of Carbohydrates</b></p> <ol style="list-style-type: none"> <li>a. Breakdown of polysaccharides – Glycogen, Starch, Cellulose</li> <li>b. Breakdown of oligosaccharides - Lactose, Maltose, Sucrose, Cellobiose.</li> <li>c. Utilization of monosaccharides - Fructose, Galactose</li> </ol>	<p><b>(15 Notional Hours)</b></p>

	<p>d. Major pathways – (with structure and enzymes)</p> <ol style="list-style-type: none"> <li>i. ED pathway</li> <li>ii. Incomplete TCA in anaerobic bacteria</li> <li>iii. Anaplerotic reactions</li> <li>iv. Glyoxylate bypass</li> </ol> <p>e. <b>Methylotrophs:</b> Oxidation of methane, methanol, methylamines and carbon assimilation in methylotrophic bacteria and yeasts.</p> <p>f. <b>Methanogenesis</b> from H<sub>2</sub>, CO<sub>2</sub>, CH<sub>3</sub>OH, HCOOH, methylamines, energy coupling and biosynthesis in methanogenic bacteria</p> <p>g. <b>Cynogens and cynotrophs:</b> cynogenesis and cynide degradation</p> <p><b>Amphibolic role of EMP; Amphibolic role of TCA cycle</b></p> <p><b>Energetics of Glycolysis, TCA and ED pathway –</b> Balance sheet only. (2.5 ATP/NADH and 1.5 ATP /FADH<sub>2</sub>) (Based on this format make balance sheet for Glycolysis -Lactic acid and Alcohol fermentation and for ED pathway)</p>	
<p><b>Unit IV</b></p>	<p><b>Fermentative Pathway &amp; Anabolism of Carbohydrates</b></p> <p><b>Fermentative pathways</b> (with structures and enzymes)</p> <ol style="list-style-type: none"> <li>a. Lactic acid fermentation <ol style="list-style-type: none"> <li>i. Homofermentation</li> <li>ii. Heterofermentation</li> </ol> </li> <li>b. Bifidum pathway</li> <li>c. Alcohol fermentation <ol style="list-style-type: none"> <li>i. By ED pathway in bacteria</li> </ol> </li> <li>d. Urea Cycle: <ol style="list-style-type: none"> <li>i. Carbamoyl Phosphate Synthetase: Acquisition of the First Urea Nitrogen atom</li> <li>ii. Ornithine Transcarbamoylase</li> <li>iii. Argininosuccinate Synthetase: Acquisition of the Second Urea Nitrogen atom</li> <li>iv. Argininosuccinase</li> <li>v. Arginase</li> </ol> </li> </ol>	<p><b>(15 Notional Hours)</b></p>

	<p>e. Glyoxylate pathway</p> <p><b>Other modes of fermentation in microorganisms</b></p> <ol style="list-style-type: none"> <li>a. Mixed acid</li> <li>b. Butanediol</li> <li>c. Butyric acid</li> <li>d. Acetone-Butanol</li> <li>e. Propionic acid (Acrylate and succinate propionate pathway)</li> </ol> <p><b>Anabolism of Carbohydrates</b></p> <ol style="list-style-type: none"> <li>a. General pattern of metabolism leading to synthesis of a cell</li> <li>b. from glucose</li> <li>c. Sugar nucleotides</li> <li>d. Gluconeogenesis (only bacterial)</li> <li>e. Biosynthesis of glycogen</li> <li>f. Biosynthesis of Peptidoglycan</li> </ol>

## **Practical based on UGMB503**

**[UGMBP05/III]**

**[Total Credits 1.5, Notional Hours 60]**

1. Study of oxidative and fermentative metabolism
2. Qualitative and Quantitative assay of Phosphatase
3. Study of Homo – Heterofermentations
4. Isolation and detection of Mitochondria
5. Glucose detection by GOD/POD
6. Enrichment and isolation and identification of Methylobacterium
7. Determination of the isoelectric point of the given protein or determination of pKa value of amino acid
8. Estimation of polyphenols/tannins by FC reagent
9. Effect of pH on enzyme activity
10. Estimation of Uric acid

## UGMB504- Industrial Microbiology and Bioprocess Technology-I

### Course Outcome: Paper IV

By the end of the course, a student should develop the ability to

**CO1:** Apply knowledge of screening methods for isolating new industrial strains.[3]\*

**CO2:** Set up Inoculum development process for industrial scale fermentations. [6] \*

**CO3:** Diagrammatically explain continuous and Batch sterilization process for sterilization of media. [4]\*

**CO4:** Relate importance of detection of variables and control. [4]\*

**CO5:** Prepare a flow chart of Wine, Vinegar, Baker's yeast and Microbial enzyme production. [4]\*

**CO6:** Apply chemical estimation methods to determine concentration of alcohol and sugar in prepared wine. [3]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

<b>SEMESTER V Paper IV</b>		
<b>Course Code</b>	<b>Title</b>	<b>Credits</b>
<b>UGMB504</b>	<b>Industrial Microbiology and Bioprocess Technology - I</b>	<b>4 Credits (60 Lectures)</b>
<b>Unit I</b>	<p><b>Upstream Processing</b></p> <p><b>Screening for productive strains and Strain Improvements.</b></p> <ol style="list-style-type: none"> <li>a. Source of Microorganisms used in bioprocess</li> <li>b. Literature search and culture collection supply.</li> <li>c. Isolation <i>de novo</i> of microorganisms producing metabolites of economic importance.</li> <li>d. Enrichment with the substrate utilized by the microorganisms being sought.</li> <li>e. Enrichment with toxic analogues of the substrate utilized by the microorganisms being sought.</li> <li>f. Testing microbial metabolites for bioactive activity.</li> </ol> <p><b>Strain Improvement.</b></p>	<b>(15 Notional Hours)</b>

	<ul style="list-style-type: none"> <li>a. Selection from naturally occurring variants.</li> <li>b. Manipulation of the genome of industrial microorganisms.</li> <li>c. Genome manipulations not involving foreign DNA or bases: Conventional mutation.</li> <li>d. Strain improvement methods involving foreign DNA or bases.</li> </ul> <p><b>Preservation of cultures</b></p> <ul style="list-style-type: none"> <li>a. Preservation of industrially important organisms</li> <li>b. Quality control of preserved stock -Key Criteria's</li> <li>c. Development of a master culture bank (MCB)</li> <li>d. Variability test to ensure reproducibility of the MCB</li> </ul> <p><b>1.4 The development of inocula for industrial fermentations</b></p> <ul style="list-style-type: none"> <li>a. Development of inocula for unicellular bacterial process</li> <li>b. Development of inocula for mycelial process</li> </ul>	
<p><b>Unit II</b></p>	<p><b>Nutrition Of Industrial Microorganisms And Sterilization Methods</b></p> <p>The basic nutrient requirements of Industrial media.</p> <ul style="list-style-type: none"> <li>a. Criteria for the choice of raw material used in industrial media.</li> <li>b. Some raw material used in compounding Industrial media.</li> <li>c. Growth factors and Water.</li> <li>d. Some potential sources of components in Industrial media- Carbohydrate and Protein sources.</li> <li>e. The use of plant waste material in Industrial media-Starch ,Cellulose, hemi-cellulose and lignin</li> <li>f. Difference between Inoculum development media and production media</li> </ul> <p><b>Sterilization</b></p> <ul style="list-style-type: none"> <li>a. Introduction: The basis of loss by Contaminants.</li> <li>b. Medium sterilization (concept of nablafactor)</li> <li>c. Methods of batch sterilization</li> <li>d. The design of continuous sterilization process</li> <li>e. Sterilization of the Fermenter</li> </ul>	<p><b>(15 Notional Hours)</b></p>

	<p>f. Sterilization of the Feeds g. Sterilization of the liquid wastes</p> <p><b>Filter Sterilization</b></p> <p>a. Filter sterilization of fermentation media b. Filter sterilization of air c. Filter sterilization of fermenter exhaust air.</p> <p><b>Achievement of aseptic conditions</b> Aseptic operation &amp; containment</p>	
<b>Unit III</b>	<p><b>Fermentation Equipments And Control</b></p> <p><b>3.1 Design of fermenter</b></p> <p>Basic functions of fermenter,- Aeration and agitation: Agitators, Stirrer glands &amp; bearing, Baffles Mechanical seals(Names &amp; Functions ,no diagrams), Magnetic Drive Sparger: porous, orifice; nozzle; combined</p> <p>e. Achievement &amp; maintenance of aseptic condition, Valves / Steam traps – Function in general &amp; examples.</p> <p><b>Types of fermenters:</b> Acetator, Cavitator, Tower fermenter, Cylindro conical, Air lift fermenter – outer loop / inner loop, Deep jet, Cyclone column, Packed tower (generator), Rotating disc, Bubble cap.</p> <p><b>Instrumentation &amp; Control of Variables</b> Introduction, Types of sensors, Sensing &amp; Control of- pH, temp, Dissolved oxygen, Flow measurement &amp; control, Pressure, Inlet / Exit gas analysis, Foam sensing, Oxygen</p> <p><b>Scale up and scale down of fermentation</b></p>	<b>(15 Notional Hours)</b>
<b>Unit IV</b>	<p><b>TRADITIONAL FERMENTATIONS</b></p> <p><b>4.1 Wine – Red &amp; White:</b> Alcoholic fermentation, composition of grape juice, Sulphur dioxide addition, factors affecting wine fermentation, examples and role of yeasts involved in fermentation, malolactic fermentation, technological aspects of wine making- red, white,</p>	<b>(15 Notional Hours)</b>

	<p>champagne, sherry, examples of aroma compounds of wine, types and examples of wine</p> <p><b>Vinegar (acetic acid):</b></p> <p>Introduction, biosynthesis, production using generator, production using submerged fermenter, recovery.</p> <p><b>Baker's yeast:</b></p> <p>Outline of production, yeast strains and their properties, factors important in production-oxygen requirement and aeration, concentration of sugar, pH, temperature, preparation of substrate, fermentation, harvesting of yeast cells, production of compressed and active dry yeast.</p> <p><b>Microbial transformation of steroids and Sterols</b></p> <p>a. Uses of steroids and sterols as sex hormones, corticosteroids, saponins, heterocyclic steroids</p> <p>b. Types of microbial steroids transformations.</p> <p><b>Production of Microbial Enzymes</b></p> <p>a. Introduction, development of new enzymes, Fermentation process, recovery and finishing, specifications, regulations and applications.</p> <p>b. Example: production of Amylase by Bacteria (Submerged) and by Fungi (SSF)</p> <p><b>Production of Carotenoids.</b></p> <p>Introduction and production of Beta carotene</p>

## UGMB601- Genetics & Virology

### Course Outcome: Paper I

By the end of the course, a student should develop the ability to

**CO1:** Diagrammatically represent Transformation, Transduction and Conjugation, as well as Homologous Recombination.[4]\*

**CO2:** Paraphrase methods of cloning and screening the clones.[2]\*

**CO3:** Solve analytical problems on restriction mapping .[5]\*

**CO4:** Summarize viral genomes, enzymes and envelops.[2]\*

**CO5:** Compare and contrast between different methods of virus visualization and enumeration.[4]\*

**CO6:** Study enrichment and isolation of Coliphages.[3]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

SEMESTER VI Paper I		
Course Code	Title	Credits
UGMB601	Genetics & Virology	4 Credits (60 Lectures)
<b>Unit I</b>	<p><b>Gene Transfer Mechanisms &amp; Recombination</b></p> <p><b>1.1 Gene transfer mechanisms in bacteria</b></p> <p><b>a. Transformation</b></p> <p style="padding-left: 40px;">bacteria</p> <p style="padding-left: 40px;">Natural transformation in <i>Bacillus subtilis</i>, <i>Haemophilus influenzae</i></p> <p style="padding-left: 40px;">Artificial Transformation</p> <p style="padding-left: 40px;">Transformation as a genetic tool: gene mapping</p> <p style="padding-left: 20px;">v. Transformation as a molecular tool</p> <p style="padding-left: 20px;">vi. Problems based on transformation.</p> <p><b>b. Conjugation</b></p> <p style="padding-left: 20px;">i. Discovery of conjugation in bacteria</p> <p style="padding-left: 20px;">ii. Properties of F plasmid/Sex factor</p> <p style="padding-left: 20px;">iii. The conjugation machinery</p> <p style="padding-left: 20px;">iv. Transfer of DNA</p> <p style="padding-left: 20px;">v. Surface exclusion</p> <p style="padding-left: 20px;">vi. Formation of Hfr and transfer of DNA</p> <p style="padding-left: 20px;">vii. Genetic uses of Hfr strains- mapping of genes</p> <p style="padding-left: 20px;">viii. Formation of F- prime and transfer of DNA</p>	<b>(15 Notional Hours)</b>

	<ul style="list-style-type: none"> <li>ix. Genetic uses of F-primers - mapping of genes</li> <li>x. Conjugation from prokaryotes to eukaryotes</li> <li>xi. Problems based on conjugation</li> </ul> <p><b>c. Transduction</b></p> <ul style="list-style-type: none"> <li>i. Discovery of transduction in bacteria</li> <li>ii. Generalized transduction- P1 as a model</li> <li>iii. Two-factor crosses to determine gene linkage</li> <li>iv. Three- factor crosses to map the order of genes</li> <li>v. Strain construction</li> <li>vi. Localized mutagenesis</li> <li>vii. Specialized transduction- lambda phage as a model</li> <li>viii. Making merodiploids with specialized transducing phage</li> <li>ix. Problems based on transduction</li> </ul> <p><b>d. Recombination in bacteria</b></p> <ul style="list-style-type: none"> <li>i. Models of Homologous recombination</li> <li>ii. Holliday model of recombination</li> <li>iii. Enzymes &amp; proteins involved in recombination</li> <li>iv. ## Practical Syllabus Based on UGMB601

**Course Code: UGMBP06/I**

**[Credits: 1.5, Notional hours: 60]**

1. Isolation of genomic DNA of *E. coli*
2. Gel Electrophoresis of DNA
3. Elution of DNA from Gel
4. Isolation of plasmid DNA by alkaline lysis method.
5. Preparation of competent cells and transformation
6. Enrichment of coliphages, phage assay (pilot & proper).
7. Restriction digestion mapping [Problem solving]
8. Polymerase Chain Reaction
9. Animal cell culture (Demonstration)

## UGMB602-Medical Microbiology and Immunology -II

### Course Outcome: Paper II

By the end of the course, a student should develop the ability to

**CO1:** Predict risk of Nosocomial infection in health care workers and enlisting Nosocomial infection [5]\*

**CO2:** Suggest appropriate Chemotherapeutic drug & find out alternate drug of choice [4]\*

**CO3:** Summarise the ABO blood group systems for Transfusions and Transplantation [2]\*

**CO4:** Analyse Antigen Antibody interactions for variety of Immunological assays [4]\*

**CO5:** Test the effect of antibiotics against the pathogens by Kirby Bauer method [4]\*

**CO6:** Distinguish the blood groups based on ABO system [4]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

<b>SEMESTER VI Paper II</b>		
<b>Course Code</b>	<b>Title</b>	<b>Credits</b>
<b>UGMB602</b>	<b>Medical Microbiology and Immunology -II</b>	<b>4 Credits (60 Lectures)</b>
<b>Unit I</b>	<b>Medical Microbiology II</b>  <b>Study of vector-borne infections – Malaria</b>  <b>Sexually transmitted infectious diseases:</b> a. AIDS b. Gonorrhoea c. Human Papilloma virus d. Genital Herpes  <b>Central Nervous system infectious diseases:</b> a. Cerebro Spinal Fluid changes during CNS infections (only tabular information) b. Polio(detail) c. Meningococcal meningitis(short) - Tabular information on bacterial and viral meningitis	<b>(15 Notional Hours)</b>

	<p>(pathogen, clinical features, mortality, sequelae)</p> <p>d. Study pathogenesis of viral encephalitis (only diagram)</p> <p><b>1.4 Health care associated infections ( overview)</b></p> <p>a. Risk factors. Common infecting organisms and measures to prevent nosocomial infections)</p> <p>b. Health associates UTI, bacteremia, pneumonia, wound, hepatitis B, C, tetanus, gastroenteritis</p> <p>c. Sources and reservoirs of health-care associated infections-self,cross,environmental sources</p> <p>d. Measures to control, standard precautions-hand hygiene, personal protective equipment, injection safety, environmental cleaning, medical equipment, respiratory hygiene/cough etiquette, precautions in Operation Theatre</p> <p>e. Post-exposure control</p> <p><b>1.5 List of new infectious diseases recognized since 1977</b></p>	
<p><b>Unit II</b></p>	<p><b>Chemotherapy of Infectious agents</b></p> <p><b>2.1 Chemotherapy of Infectious Agents</b></p> <p>Attributes of an ideal chemotherapeutic agent</p> <ol style="list-style-type: none"> <li>i. Selective toxicity</li> <li>ii. Bioavailability of drug</li> <li>iii. Routes of drug administration</li> <li>iv. LD50</li> <li>v. MBC</li> </ol> <p><b>Mode of action of antibiotics:</b></p> <p><b>a. Bacteria:</b></p> <ol style="list-style-type: none"> <li>i. ## **Practical Syllabus Based on UGMB602**

**Course Code: UGMBP06/II**

**[Credits: 1.5, Notional hours: 60]**

1. Detection of malarial parasite in blood films.
2. Selection and testing of antibiotics using the Kirby-Bauer method
3. Determination of MBC of an antibiotic.
4. Antibiotic assay in body fluids
5. Blood grouping – Direct & Reverse typing, Major-minor cross match,
6. Coomb's direct test, Calculation of hematological indices
7. Serum protein separation by electrophoresis
8. Determination of Isoagglutinin titer
9. Demonstration experiments - Widal
10. ELISA (Qualitative)
11. Single Radialimmunodiffusion.
12. Visit to blood bank and preparation of visit report

## UGMB603-Microbial Biochemistry – II

### Course Outcome: Paper III

**By the end of the course, a student should develop the ability to**

**CO1:** Distinguish the Lipids and mention its functions [4]\*

**CO2:** Illustrate Catabolism and Anabolism of Nucleotides and Amino acids [3]\*

**CO3:** Identify the terms involved in the regulation of metabolic pathways[2]\*

**CO4:** Discriminate between Regulation of transcription by positive & negative control and evaluate the role of DNA Binding Proteins[5]\*

**CO5:** Discriminate mechanisms of Light and Dark reactions which are part of Photosynthesis [5]\*

**CO6:** Measure proteins by Folin Lowry's method [5]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

## **Practical Syllabus Based on UGMB603**

**Course Code: UGMBP06/III**

**[Credits: 1.5, Notional hours: 60]**

1. Detection of PHB producing bacteria
2. To study catabolite repression by diauxic growth curve.
3. Protein estimation by Folin Lowry's method
4. Qualitative and Quantitative assay of Protease
5. Qualitative detection of Lipase
6. Study of breakdown of amino acids – Lysine decarboxylase and Deaminase activity
7. Study of Lithotrophs – Nitrosification and Nitrification

## UGMB604- Industrial Microbiology and Bioprocess Technology-II

### Course Outcome: Paper IV

**By the end of the course, a student should develop the ability to**

**CO1:** Diagrammatically/ schematically represent Effluent Treatment steps. [4]\*

**CO2:** Choose correct method of recovery for a particular product. [5]\*

**CO3:** Differentiate between ATC and PTC media [4]\*

**CO4:** Exemplify various biological and physical indicators used for Sterility Assurance. [2]\*

**CO5:** Prepare a flow chart for manufacturing process of Streptomycin, Vitamin B<sub>12</sub>, Glutamic acid, Mushroom and Vaccines. [4]\*

**CO6:** Perform agar diffusion type of Bioassay to determine concentration of Streptomycin and Vitamin B<sub>12</sub>. [3]\*

**\*Note: [1]: Remembering, [2]: Understanding, [3]: Applying, [4]: Analyzing, [5]: Evaluating, [6]: Creating**

## **Practical Syllabus Based on UGMB604**

**Course Code: UGMBP06/IV**

**[Credits: 1.5, Notional hours: 60]**

1. Bioassay of an antibiotic ( Streptomycin)
2. Bioassay of Vitamin B12 (Cyanocobalamin).
3. Perform immobilization of yeast cells for invertase activity - making of beads, determination of activity and viable count by haemocytometer.
4. Plant tissue culture – Callus culture
5. Sterility testing of inject able.
6. Preparation of TAB vaccine.
7. Estimation of phenol.
